Software Engineering student since 2022 with a strong foundation in fullstack web development and a passion for solving complex problems. Skilled in modern frameworks, databases, and real-time communication technologies. Driven, adaptable, and committed to continuous learning, with a focus on creating efficient, scalable, and user-centered digital solutions.

ACADEMIC PROJECTS

Automotive Workshop Management System

Web & Mobile Application

- A platform to manage clients, vehicles, service orders, and inventory in an automotive workshop. It streamlines operations, tracks services, and manages repair progress. The system supports various roles like receptionists, mechanics, and managers. Developed with Flutter for both web and mobile, offering seamless access across devices

Uasistencia

Web Application

- Uasistencia is a responsive web application developed with React for the front-end and FastAPI for the back-end, designed to efficiently manage attendance records in an educational environment. The platform supports three user roles — teachers, class leaders, and attendance supervisors — each with specific functionalities: teachers can register their class attendance, class leaders can record attendance for their teachers, and supervisors can oversee the attendance of all teachers. This system is intended for potential implementation at the Universidad Autónoma de Sinaloa.

TalkZone

Web Application

- A social web application designed to connect users through real-time voice chat and interest-based content sharing. The platform enables users to post, follow others, join voice rooms, and match with people based on shared topics and learning goals
